

BUILDORBIT

Workforce & HR Management Platform

About BuildOrbit

BuildOrbit is an end-to-end workforce and HR management platform designed to streamline operations, automate attendance, and manage payroll. Built for modern enterprises, it seamlessly connects employee management, leave tracking, location-based attendance, and client relations into one secure platform.

Why BuildOrbit

Managing a distributed workforce is complex. BuildOrbit eliminates data silos by connecting attendance, leave, and payroll directly. By providing automated workflows, real-time geofenced tracking, and actionable analytics, BuildOrbit helps organizations reduce administrative overhead, ensure compliance, and empower employees through self-service tools.

Core Capabilities

Workforce Management

Maintain a comprehensive directory of your organization. Manage departments, designations, teams, and employee profiles from a single dashboard.

Employee Management

Enable employee self-service for updating profiles, tracking leave balances, and viewing payslips.

Attendance

Track daily attendance with detailed logs for check-ins, check-outs, and worked hours. View attendance histories across the entire organization.

Site & Location Management

Assign employees or entire teams to specific work sites. Enforce attendance compliance using HTML5 Geolocation and WebRTC camera capture for 100m geofencing validation.

Leave Management

Create custom leave types (paid, unpaid, medical) with configurable policies. Employees can request leave, upload supporting documents, and track approvals seamlessly.

Payroll

Automate draft payroll generation. BuildOrbit calculates base salaries, applies manual allowances, and automatically deducts for unpaid leaves to generate accurate net salaries and payslips.

CRM / Lead Management

Track client leads through a customizable pipeline. Manage follow-ups, assignments, and conversion statuses directly alongside workforce operations.

Reports & Analytics

Access specialized reports including attendance tracking, payroll trends, and lead sales funnels through dynamic Recharts-powered analytics.

Notifications

Keep teams aligned with automated in-app notifications and integrated transactional emails (via Resend) for leave requests, approvals, and payroll alerts.

Security & Access Control

Protect sensitive data with a robust role-based access control (RBAC) architecture, JWT-based sessions, and secure Next.js middleware.

Audit & Activity Tracking

Monitor system usage with comprehensive login activity logs and detailed audit trails for critical entity changes.

Role-Based Access

BuildOrbit ensures security and focus through tailored dashboards and permissions:

- **SUPER ADMIN & ADMIN:** Full system access, policy configuration, and global reporting.
- **HR:** Manage payroll, leave approvals, employee records, and HR reporting.
- **LEAD:** Oversee assigned teams and CRM lead pipelines.
- **ENGINEER / EMPLOYEE:** Access self-service portals to mark attendance, apply for leave, view payslips, and manage profiles.

Attendance & Location

Ensure accurate time-tracking for distributed teams. BuildOrbit allows HR to define Sites with specific coordinates and radii. When employees log in via the Self-Service Attendance Portal, the system validates their location against the assigned site's geofence before allowing a check-in.

Leave & Payroll

BuildOrbit seamlessly connects leave to payroll. When an employee takes unpaid leave, the system automatically calculates the exact deduction based on their daily rate and the organization's payroll policy, reflecting the change instantly in their

next draft payroll.

Medical Leave

Configure specialized leave types like Medical Leave that require supporting documentation. Employees can securely upload prescriptions or medical certificates, which HR can review during the approval workflow.

Reports & Analytics

Transform data into actionable insights. Admins and HR can access visual dashboards (powered by Recharts) detailing leave balances, attendance compliance, payroll cost trends, and CRM lead conversion funnels.

Security

Built on enterprise-grade infrastructure, BuildOrbit utilizes PostgreSQL with Prisma ORM, secure JWT session management, strict RBAC middleware, and comprehensive audit logging to protect organizational data.

Technology

BuildOrbit leverages a state-of-the-art stack: Next.js (App Router), React, Tailwind CSS v4, Prisma ORM, PostgreSQL, Recharts, and Resend for emails. The platform utilizes semantic CSS variables for a modern, responsive "Graphite / Near-Black" design system.

Product Experience

The platform offers a premium, responsive user interface featuring a dynamic 12-column analytics grid, SVG charts, and a centralized enterprise dashboard accessible across desktop and mobile devices.
